## Fleetguard® Self-Cleaning Precleaners

### Safeguard Your Equipment and Your Bottom Line

Air filter life is directly related to the amount of debris ingested through an engine's air intake. Installing a Fleetguard® Self-Cleaning Precleaner as the first stage of an air intake system prevents the majority of heavier-than-air particles from entering the system. This results in longer air filter life, more efficient engine performance and decreased maintenance expenses.

#### Benefits associated with the use of self-cleaning precleaners:

- **Extended air filter life** – handles all kinds of mixed debris, including mud, snow, rain, leaves, sawdust, chaff, and dust
- **Increased uptime** – lowers cost per operating hour by reducing parts, labour, and downtime
- **Extended engine life** – lowers air restriction, which increases usable horsepower
- **Withstand harsh conditions** – rugged engineered polymer construction gives you the strength of steel without the corrosion
- **Expanded capacity** – multiple units can be installed to meet air flow handling requirements
- **Improves fuel efficiency**

**Fleetguard® Self-Cleaning Precleaners protect your equipment and your bottom line.**

Available in single or dual stages, you can pick the level of protection you need, no matter the environment.
